Winter Seed Wheat - Winter Seed Rye

PEDIGREE STRAINS—CLOSELY GRADED, FREE FROM CHEAT,
SMUT, GARLIC OR COCKLE
“PENN 44” (Bearded)

“PENN 44” represents the development of many years of careful selection which held first place as a big yielding wheat.

It is a reliable yielder, year after year. In years when all conditions are against successful crops, this variety makes good average yields in spite of adverse conditions. Farmers who have not been successful in raising even fair crops of wheat on rather thin soils, should grow this variety, and produce a satisfactory crop of straw and a surprising crop of grain.

The grain is of the finest quality, a genuine Longberry, dark red and hard and even on poor soils the grain will be of full size. There is no wheat grown that is better liked by millers.

Its extreme hardiness will carry it safely through severe winters and its vigorous constitution withstands attacks of insect pests and diseases.

Sow 1½ bushels per acre.

Price, peck 1.00; bushel of 60 lbs., $3.25; 10-bushel lots, $3.15 per bushel.

LEAP’S PROLIFIC (Beardless)

Leap’s Prolific Wheat was originated about ten years ago in the Shenandoah Valley of Virginia. Since then over one hundred thousand bushels have been distributed among the wheat growers throughout the Eastern States. It has gained great popularity since its introduction. Reports from various parts of the country give yields averaging from 35 to 40 bushels to the acre. These yields were produced not on small sample trials, but on large acreages. It is extremely hardy, having survived and produced a perfect crop after the fields were covered with ice during the winter.

It roots deeply and stools vigorously. It ripens early, with grain and straw maturing at the same time. The heads are beardless, glistening white in color, compactly built, filled with heavy, plump, grains from base to tip, well enclosed, thereby protecting them from unfavorable weather conditions and also preventing self-shelling when cutting.

The grain is large, dark red of the Longberry type. The straw is long, stiff and very uniform, yielding a large tonnage to the acre. It is particularly desirable for its milling qualities. 1½ bushels are required to sow an acre. (See engraving.)

Price, peck 1.00; bushel of 60 lbs., $3.25; 10-bushel lots, $3.15 per bushel.

FORWARD (Beardless)

This beardless variety is a handsome Wheat. It succeeds and produces heavy crops on poor, thin land, and it also has extreme hardiness to recommend it. The gold-colored straw is very thick and strong, easily supporting the heavy grain without breaking. The large amber kernels are placed four to a breast, eight breasts to a side, with long symmetrical heads having a brown chaff. One of our growers says:

“It stools as strong as any wheat I ever saw. It had a vigorous, healthy growth all the season, and stood well without lodging. It is very hardy.” Sow 1½ bushels per acre.

Price, peck 1.00; bushel of 60 lbs., $3.25; 10-bushel lots, $3.15 per bushel.

ROSENN RYE

A New Large Yielding Rye That Thrives Well On All Soils

This remarkable Rye is extremely hardy due to its Russian origin. Rosen Rye was brought to its present high state of development at the Michigan Agricultural College, where it has proven superior to all other sorts in growth and productivity.

While the average yield for rye throughout the United States is only 15 bushels to the acre, Rosen Rye has yielded up to 40 bushels to the acre. The plant is extremely vigorous, producing a luxuriant stiff straw from large stools. On account of its vigorous stooling habit only one bushel will be required to sow an acre.

The grain is extremely attractive, plump, and heavy.

One of the principal merits of this valuable grain, is that it thrives equally as well on light soils as it does on heavy soils. It has proved to be a dependable sort by producing large crops in unfavorable seasons. Sow 1½ bushels per acre. (See engraving.)

Price, quart 25c.; peck 80c.; bushel of 66 lbs., $2.60; 10-bushel lots, $2.40 per bushel.

GIANT WINTER RYE

A remarkably heavy cropping Rye, having in fair tests out-yielded many other varieties both in straw and grain. The straw is of uniform length, strong and of extraordinary stiffness.

Price, quart 25c.; peck 80c.; bushel of 66 lbs., $2.60; 10-bushel lots, $2.40 per bushel.

WINTER RYE

The variety most commonly cultivated, whether sown for grain, straw or cutting green.

Price, quart 25c.; peck 80c.; bushel of 66 lbs., $2.50; 10-bushel lots, $2.40 per bushel.
### ORDER SHEET FOR FARM SEEDS

Henderson's Special Grass Mixtures for Hay and Pasture

**HAY AND PERMANENT PASTURE**

Special Grass Seed Mixture

This mixture is made up of native and acclimated foreign Grasses thoroughly blended, and improved upon during trials under widely varied conditions, soils and localities for several years until practically perfect, our aim being to produce, under the extremes of the American climate, a Permanent dense and deep-rooting turf that would yield year after year the maximum quantity of foliage. These Grasses are of superior quality, invigorating, sweet and nourishing, whether used as hay or pasture.

In preparing these Mixtures the greatest care is exercised in selecting such varieties as are suited to the soil to be sown and are likely to realize the object in view. Therefore a description of the soil whether Light, Medium or Heavy, and climate, and if with or without a grain crop, should accompany each order. (See Illustration.)

Price, lb. 50c.; 10 lbs. $4.00; 25 lbs. $8.75; 100 lbs. $30.00; transportation paid.

**PERMANENT PASTURE**

Special Grass Seed Mixture

There is no more important part of a farm than a good pasture, and that can only be obtained by the use of the proper Grasses, varieties that have different root formations and different habits and season of growth, in order to maintain a rich, close turf throughout the entire season. Timothy should never be used for pasture because it will not stand trampling, and soon runs out when heavily pastured and at best is short-lived, as compared with the permanent Grasses used in our Special Mixtures. These Mixtures contain over a dozen of the best permanent Grasses, both American-grown and imported. All are permanent, and when once established will last indefinitely, if the fertility of the soil is kept up by occasional top-dressing. Sow 40 lbs. per acre.

Price, lb. 50c.; 10 lbs. $4.00; 25 lbs. $8.75; 100 lbs. $30.00; transportation paid.

Full directions for sowing enclosed in every bag. In ordering, state whether for Light Soils, Heavy Soils or Medium.

March 7th, 1935

A much delayed testimonial in regard to some grass seed purchased from you forty-four years ago, known as Permanent Pasture. This lot has been in pasture ever since I put it in the seed, and is still a No. A-1 pasture, in fact, the best pasture on the farm. It had always been known up to that time, as a hard lot to keep in grass.

Ambrose M. Culver
Amenia, N.

The Purchaser Pays Transportation Charges on Farm Seeds Except Where Noted.

Prices Are Subject to Change Without Notice.

**FARM MANAGERS**—We have always on hand applications by competent men for positions as farm and estate managers, men who have been trained in the business and are well posted on agriculture generally, also the raising and care of live stock. We will be very pleased to enter into correspondence with those who require the services of such. We make no charge for this service, either to employer or employee.

**ALL GARDENERS OF EXPERIENCE** know that success depends largely on weather conditions and proper cultivation, so in accordance with the universal custom of the seed trade PETER HENDERSON & CO., gives no warranty, express or implied, as to description, quality, productive

ness, or any other matter, of any Seeds, Bulbs, Roots or Plants they send out, and they will not be in any way responsible for the crop.
Cleaned at the source of production, and reseeded in our own warehouses with the most modern seed-cleaning machinery in America. They are then analyzed and tested by us, and verified by check tests at State and Government Stations.

Henderson’s Individual Recleaned Grasses are therefore unequalled for Purity and Germination.

Better turf is obtained in most cases if a mixture of grass seed is sown. We will be glad to make special mixtures when desired in accordance with the purchaser’s requirements or after his own formulas. Transportation Charges Paid.

AWNLESS BROME GRASS (Bromus Inermis). Will produce heavy crops in dry sections and on poor, dry soil. It is one of the latest germinating grasses and succeeds in a wide range of temperature.

Price, lb. 60c.; 10 lbs. $5.50; 25 lbs. $12.50.

BENT, ASTORIANA (Agrostis Capillaris). This variety differs from Rhode Island Bent in that it is an underground creeper, usually by rhizomes. It gives a dense, richly colored sod of a pleasing green color and a fine texture. It is very desirable for putting greens and lawns.

Price, lb. $1.15; 10 lbs. $12.00; 25 lbs. $28.75; 100 lbs. $100.00.

BENT, COLONIAL (Agrostis Tenuis). This grass imported from New Zealand, is identical with Rhode Island Bent. Leaf-blades very narrow and flat, but very green; a slightly creeping bent that makes a fine turf for Putting Greens. It succeeds on all well drained soils and will thrive on acid soils.

Price, lb. $1.25; 10 lbs. $12.00; 25 lbs. $28.75.

BENT, CREEPING (Agrostis Species or South German Mixed Bent). This is undoubtedly one of the finest grasses for Putting Greens. The distinctive feature of this species is its compact, creeping, rooting stems. The stoloniferous roots form a strong enduring turf which withstands hard usage. Does well on all soils, particularly on light, moist land.

Price, lb. $1.40; 10 lbs. $28.75; 100 lbs. $100.00.

BENT, RHODE ISLAND (Agrostis Tenuis). Rhode Island Bent is distinguished from Red Top by its dwarfer habit, shorter and narrow leaves. It is a peculiar open panicle which does not become closed when mature. Thrives well on acid soils. Rhode Island Bent produces only short stolons or runners; makes a very fine dark green turf. An excellent grass for Putting Greens.

Price, lb. $1.25; 10 lbs. $12.00; 25 lbs. $28.75; 100 lbs. $100.00.

BENT, SEASIDE (Agrostis Maritima). This was first identified in Oregon, and has been offered by others under a special trade name. It is a hardy creeping variety forming a close mat-like sward and is very desirable for Putting Greens. Does well in moist situations, making a rapid growth rate. An extremely hardy, a very fine creeping bent. It grows on all types of soils but shows a preference for clay and clay loams, and particularly that which is lime-line.

Price, lb. 75c.; 10 lbs. $6.00; 25 lbs. $14.00; 100 lbs. $55.00.

BLUE GRASS, CANADA (Poa Compressa). A very hardy perennial grass with creeping root-stocks. It grows on the poorest and driest soils—sandy, gravelly, or clayey, standing severe wetness or drought. A useful grass on Fairways and Ties.

Price, lb. 60c.; 10 lbs. $5.50; 25 lbs. $12.00; 100 lbs. $50.00.

BLUE GRASS, KENTUCKY (Poa pratensis). It is a true perennial lasting indefinitely. It is found in every part of the United States and is admirably suited to the American soil. It is a fine, dark green grass, making under favorable conditions a perfect sward. It thrives well on all soils, succeeds especially on clay soils.

Price, lb. 75c.; 10 lbs. $4.50; 25 lbs. $10.00; 100 lbs. $35.00.

CRESTED DOG’S TAIL (Cynosurus Cristatus). Should enter in moderate quantity in mixtures and in pure stand.

Price, lb. 50c.; 10 lbs. $5.00; 25 lbs. $11.25.

FESCUE, CHEWING’S NEW ZEALAND (Festuca Chewing). This variety of the native New Zealand Fescue has been used for the past four years and is now recognized as one of the leading grasses for Putting Greens and Fairways. Makes a fine compact turf of dark green color.

Price, lb. 60c.; 10 lbs. $5.50; 25 lbs. $13.00; 100 lbs. $50.00.

FESCUE, CREEPING RED (Festuca rubra North German). This is the true creeping variety thriving well on poor soils, and especially adapted for shaded locations. It forms a dense permanent turf which leaves little room for weeds to come through.

Price, lb. $1.25; 10 lbs. $12.00.

FESCUE, FINE LEAVED SHEEP’S (Festuca Tenella). The leaves of this variety are very thin, and dark green. It thrives on very dry soils and in the shade.

Price, lb. $1.25; 10 lbs. $12.00.
CLOVERS

Henderson’s Medium Red Clover

**(Trifolium Pratense)**

**DOMESTIC GROWN**

Common or Medium Clover, June Clover

Red Clover according to locality is a biennial or short-lived perennial. It grows one to two feet in height and usually makes two crops a year, yielding two to three tons of cured hay per acre. Clover hay is very nutritious; all stock fed on it require less grain; chopped and steamed it is a good substitute for green food in poultry during the winter. As pasturage all animals thrive on it, particularly cattle, sheep and pigs, and as a green manuring and soil improving crop it is very valuable, adding humus and nitrogen to the soil. In Northern States Red Clover seed is usually sown in the spring; the earlier the better. If grown alone, use 12 to 14 pounds of seed per acre if broadcasted and cover not over half an inch deep. Red Clover may be seeded with a number of different grasses as Timothy, Orchard Grass or Tall Oat Grass, but usually it is grown with Timothy. 5 to 10 pounds of Clover and half a bushel of Timothy seed being sown per acre. A very satisfactory combination is 5 pounds of Red Clover, 5 pounds of Alisike Clover, 20 pounds of Timothy and 5 pounds of Fancy Red Top per acre. This makes a fine quality of merchantable hay and the field does not run out so soon as Clover and Timothy alone. (See engraving.)

Price, lb. 75c.; 10 lbs. $7.00; 25 lbs. $16.25; 100 lbs. $60.00.

**Mammoth or PEA VINE RED Clover**

**(Trifolium Pratense perenne)**

**DOMESTIC GROWN**

Perennial. Time of flowering, July. Height, 2 to 3 feet. Quite distinct from the common Red Clover, being of larger and coarser growth and valuable for purposes for which the latter is entirely unsuited. It lasts longer and is two or three weeks later than common Red Clover. Of very robust growth, yielding enormous bulk valuable for reclaiming exhausted lands. Sow (if alone) about 12 lbs. per acre. Henderson’s Superior Sample (extra reclaimed).

Price, lb. 80c.; 10 lbs. $7.50; 25 lbs. $17.50; 100 lbs. $65.00.

**SWEDISH CLOVER**

(Trifolium Hybridum)

**Alisike or Hybrid Clover**

Perennial. Time of flowering, July and August. Alisike or Swedish Clover is a hybrid intermediate in growth and appearance between Red and White Clovers. The blossoms are pinkish white. It is a perennial and one of the hardest of all Clovers, thriving particularly well in cool and cold climates and stands freezing well, but also adapts itself to most climates where Clovers grow, and will grow in moister soil than Red Clover, in fact, has produced splendid crops under irrigation. The plants attain a height of one to two feet; stems and leaves, though smaller than those of Red Clover, are much more numerous, making hay of fine texture. Alisike frequently produces good crops on soils on which Red Clover will not grow. We strongly advise farmers to add 2 or 3 lbs. per acre to their usual seedling of Red Clover and Timothy. Sow (if alone) 5 lbs. per acre. (See engraving.)

Price, lb. 90c.; 10 lbs. $5.75; 25 lbs. $13.75; 100 lbs. $50.00.
GRIMM ALFALFA
The Hardest Alfalfa Known
DOMESTIC GROWN

The attention of the Minnesota experiment station was called to this alfalfa in 1901, and by careful experimentation Grimm alfalfa was found to be far superior to common kinds in withstanding unfavorable winters. This strain of alfalfa seed not only endures extremely low temperature, but it can be cut with greater safety in the fall, and will bear more abuse in the way of pasturage than any other forage plant. Grimm alfalfa has larger crowns, and a more spreading root system than the ordinary alfalfa. It is also claimed that it will yield from ten to fifteen percent more than any other variety, and will start and thrive in undrained wet locations, where the ordinary sort was tried unsuccessfully. One of the characteristics of the Grimm alfalfa is that some of the plants produce peculiar greenish-yellow flowers. Sow 30 lbs. per acre.

HENDERSOES' RECLEANED
NORTHERN GROWN ALFALFA
(Medicago sativa)
DOMESTIC GROWN

A Clover-like leguminous plant of great importance as a hay and forage crop, nutritious and rich in protein elements. It grows 2 to 5 feet high and sends roots 5, 10, 20, and sometimes 30 feet into the subsoil. It needs one season to become established, after which it yields enormous crops annually for many years. 3 or 4 cuttings per season, aggregating 4 to 6 tons, or even more, per acre, are harvested, according to conditions and locality. It does well on all good, rich soils (except heavy clay), if well drained, or overlying a permeable subsoil; on calcareous soil it thrives especially well. Alfalfa is one of the best cover crops for orchards. Our strain of seed is grown in northern regions, where plants have to endure extreme cold and still thrive in those high altitudes. Our experience—and that of our customers—has shown that such seed is undoubtedly the best for the north and eastern states. Before offering this seed to our customers for sale, it is thoroughly re-cleaned by the most modern seed cleaning machinery. By this process we separate the sound, perfect seeds from all rubbish and light, imperfect seeds. Sow in the Northern States during June, July or August, 30 to 40 lbs. of seed per acre if broadcasted, 25 or 30 lbs. if drilled. In the South sow in February or September. (See engraving.)

Price, lb. 75c.; 10 lbs., $7.00; 25 lbs., $16.25; 100 lbs., $50.00, purchaser paying transportation.

VETCH, SAND or WINTER
(Vicia villosa)
The Best Legume for Sandy Soils

It is the earliest crop for cutting, and a full crop can be taken off the land in time for planting spring crops. Being much harder than Scarlet Clover, this is the forage plant to sow in the Northern States, where Scarlet Clover winter kills, though it is equally valuable in the South.

Although Sand Vetch succeeds on poor, shaly soils, it is, naturally, more vigorous on better land. Under such conditions the plant produces numerous branches 3 to 6 feet long. Sand Vetch is hardly all over the United States, and in most places remains green all winter. The crop may be sowed, either from the middle of August to the middle of September, or in the spring from the middle of April to the middle of May. Sown in the fall it should be mixed with Mammoth Red Clover or Ryed to serve as a support for the vines, thus keeping the forage off the ground. If sown in the spring it may be mixed with Oats or Barley. Fall sown crops furnish some forage before winter comes, and as growth starts very early in the spring it can be pastured, cut for hay, or turned under to renovate the soil.

The foremost orchardists highly recommend Sand Vetch as a cover crop. Soluble plant food in porous soils leaches away in considerable amounts during the late fall and early spring, when the roots of trees are not actively foraging for it. Owing to the fact that it grows late in the fall, and to its ability to live over winter, Sand Vetch is certainly the best cover crop for orchards. (See engraving.)

Sow 50 lbs. per acre, with one-half bushel of Ryed or Wheat.
Price, lb., 35c.; 10 lbs., $3.00; 50 lbs., $15.00; 100 lbs., $20.00.

TRUE DWARF ESSEX RAPE
Sow in the North From April to End of August and in the South During September and October

In the United States we have millions of acres of land that annually lie idle or run to weeds the latter part of the season, after the grain, potato and hay crops have been harvested, a large portion of which might be made to produce one of the finest feeds imaginable, and in the greatest abundance, at a time when cattle, sheep and hogs are running through bare pastures in search of a scanty living. Under favorable conditions Rape is ready for pasturage sheep or cattle within six weeks from time of sowing, and on an average one acre will carry twelve to fifteen sheep six weeks to two months. When on the Rape they should at all times have access to salt; but water is not necessary. There are several varieties of Rape, but care should be taken to procure the Dwarf Essex, or English, as it is sometimes called, which does not seed the same season as sown, unless in some exceptional cases, as when sown too early and the young plant is touched by frost. In northern states it should be sown from April to end of August for fall pasturing, but as it thrives best in cool weather, it should not be sown in the Southern States until September or October for winter pasture. In the latitude of New York it should be sown in April, or in July or August. Its feeding properties are probably twice as good as those of Clover, and if for sheep the feeding value of Rape exceeds all other plants we know of. To secure the best results, the Rape should be sown in drills. Sow 4 lbs. per acre broadcast, 2 to 3 lbs. per acre in drills.

Price, lb., 30c.; 10 lbs., $3.30; 25 lbs., $5.00; 50 lbs., $8.00; 100 lbs., $15.00.

The Purchaser Pays Transportation Charges on Farm Seeds Except Where Noted.

The Early Autumn Is an Ideal Time for Sowing Lawn Grasses

Henderson’s Lawn Grass Seed Mixtures
THERE IS A HENDERSON LAWN GRASS SEED MIXTURE FOR EVERY PURPOSE

SHADY NOOK
Lawn Grass Seed for shady places. Price, ½ lb., 40c.; 1 lb., 70c.; 3 lbs., $2.00; 5 lbs., $3.25; 10 lbs., $6.00; 20 lbs., $11.50; 100 lbs., $55.00, transportation paid.

SUNNY SOUTH
Lawn Grass Seed for Southern States. Price, ½ lb., 40c.; 1 lb., 70c.; 3 lbs., $2.00; 5 lbs., $3.25; 10 lbs., $6.00; 20 lbs., $11.50; 100 lbs., $55.00, transportation paid.

SEA SIDE
Lawn Grass Seed for sandy soil and saline surroundings. Price, ½ lb., 30c.; 1 lb., 50c.; 3 lbs., $1.45; 5 lbs., $2.35; 10 lbs., $4.50; 20 lbs., $9.00; 100 lbs., $42.50, transportation paid.

TERRACE SOD
Lawn Grass Seed for terrace and embankments. Price, ½ lb., 40c.; 1 lb., 70c.; 3 lbs., $2.00; 5 lbs., $3.25; 10 lbs., $6.00; 20 lbs., $11.50; 100 lbs., $55.00, transportation paid.

TOUGH TURF
Grass Mixture for tennis courts, croquet grounds and bowling greens. Price, ½ lb., 30c.; 1 lb., 50c.; 3 lbs., $1.45; 5 lbs., $2.35; 10 lbs., $4.50; 20 lbs., $9.00; 100 lbs., $42.50, transportation paid.

Special “Bent Formula” Lawn Grass Seed Mixture
It Makes Every Lawn Like a Putting Green and Has Aroused Great Enthusiasm Among All Lovers of a Perfect Lawn

On account of the growing popularity of golf in recent years, the question has many times been put to us by our customers, “Why can’t I have a lawn that looks like a Putting Green?” Our answer to this was to make up a combination of the finest re-cleared grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so largely used in the finer Putting Greens of today.

We are very pleased to announce that our sales of this mixture have more than trebled since we offered it to our customers, and there seems to be no doubt that again this year there will be another great increase in the demand for this special formula.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is the most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn.

Also, every spring apply a dressing of Henderson’s Lawn Enricher. Broadcast this, using ten pounds for each 200 square feet, and water it in thoroughly with a hose.

We advise seeding at the rate of one pound to cover a space of 10 x 20 or 200 square feet. Price, ½ lb., 50c.; 1 lb., 95c.; 5 lbs, $1.50; 10 lbs., $8.50; 25 lbs., $20.00; 100-lb. lots and upward, $70.00 per 100 lbs., transportation paid in the U. S.
Autumn Is the Best Time to Make or Renovate a Lawn

The “HENDERSON” Lawn Grass Seed

Sown in the Autumn, produces Enduring Turf which will withstand Summer Droughts

For a long time we have urged the Fall planting of grass seed, for either making a new lawn, or renovating the old one, and year after year the results have shown the wisdom of following the natural way.

Grass seed planted in the Fall, germinates rapidly, and will attain a strong growth by the time frost comes. Even with the rigorous Northern winters there is very little danger of its being injured by the cold weather; in fact, our advice is not to protect it in any way.

Even before the frost is completely out of the ground, we find that the young grass responds to the first warm days. Weed seeds from the previous Summer will not start until weeks after the Fall-sown grass has become strong and vigorous enough to withstand their more rapid growth; in fact, if it has been planted thickly, the grass will often crowd out the weeds.

Any lawn will be improved by a light sowing of the appropriate Henderson mixture during early September, together with an application of one of the Henderson fertilizers. You will find a list of our various grass mixtures for particular places on Page 7 and whether you are going to make a new lawn, or renovate the old, we strongly urge your doing so at once.

A copy of our pamphlet “How to Make a Lawn” is sent with every package of the Henderson Lawn Grass Seed.

In the latitude of New York, the seed may be sown up to the first of October, farther south later, and farther north up to about September first.

The most valuable and longest lasting improvement to the home grounds, is a properly built lawn sown with The Henderson Grass Seed. Customers tell us that lawns made a score or more years with our seed are as beautiful today, as they were in their first flush of youth.

The importance of a good lawn is stressed by the high scoring they receive in Metropolitan and National Garden Contests.

For renovating use half these quantities.

We give full instructions for making new lawns or re-seeding old ones in our booklet “How to Make a Lawn.” This is enclosed in every package sent out by us.

HENDERSON'S LAWN ENRICHER and Top Dresser

For New and Old Lawns, Athletic Fields, Golf Courses, Etc. It is Odorless, and Quickly Induces a Luxuriant Green Growth.

The constant mowing of grass and removal of clippings also removes a proportion of digested plant food. Therefore, if the luxuriance of a lawn is to be maintained, it must be top dressed at least once a year with suitable fertilizer. The Henderson Lawn Enricher is a clean, lawn dressing which never fails in inducing a rapid and rich green growth.

For forming a new lawn a 10-lb. package is sufficient to go over an area of 200 square feet, or 1,000 to 1,500 lbs. per acre, or a smaller quantity for renovating an old lawn. Apply broadcast with machine or by hand as evenly as possible on a quiet day and preferably just before rain. If applied during the summer use half of the quantity and water in thoroughly with a hose.

SPECIAL NOTICE.—We prepare transportation charges on Fertilizers by parcel post, express or freight at our option within the first and second zones (100 miles of New York City). Purchasers, beyond these zones, pay transportation charges.

BONE MEAL Henderson's Medium Fine

Excellent for Top Dressing Lawns

It is for its slow disintegrating and long lasting qualities that Bone Meal is so very desirable for fertilizing all hard wooded plants, including flowering shrubs, fruit bushes, trees, and the like.

As there is absolutely no danger of burning or coming rot in flaky bones, including Tulips, Hyacinths, etc., a liberal application of Bone Meal mixed into the soil before planting them will be amply repaid for by the remarkable size and brilliancy of the flowers obtained.

For Lawns it is a dependable fertilizer, as it contains the essential elements that grass requires. It may be broadcast as a top-dressing at any time either in early spring or during the growing season.

Quantity required. For lawns, pasture and moving lands 10 lbs. to 200 square feet or 1/2 to 1 ton per acre. For trees and vines, 2 to 4 lbs. each. For field and garden crops, 1/4 to 1 ton broadcast and harrowed in. For rose beds, pet plants, etc., one part to about fifty of soil.
